FULLSTACK APPLICATIONS

BUILT

ChatterDox: <https://chatterdox.herokuapp.com/>

Git: <https://github.com/peraltot/Project-3-Speech>

- Team project: Tasks included extracting continuous audio JSON object from Watson API and implementing CRUD using React JS - Axios - Express Routing and Mongo DB. Also responsible for Google Drive and Auth02 API setup and integration.
- A React MERN App using IBM's Watson API (speech to text) technology and Google Drive and Auth02 API.
- A school reading Lab tool, to be used by students during reading labs, to record, save, email and upload Stories to google drive.

Event Monster <https://eventmonster.herokuapp.com/>

Git: <https://louise-hayes.github.io/Event-Monster/>

Login with 'admin@admin.com' and password 'admin', user@user.com password 'user'

- A Full Stack MVC Javascript App utilising Facebook Autho, node JS, Handlebars JS, Sequelize, Materialize CSS, HTML, Mocha Unit Testing, Cucumber/ Gherkin Behaviour Driven Code.
- A PTA Parent Portal to allow volunteers to sign up to school events. Team Project of 4 people.

- Responsible for the Project Vision and Requirements Spec, User Creation and Find feature top to toe, including Handlebars Modals, JQuery events, AJAX API calls and Express Route and SequelizeDB functions. Also implemented the Express Routes for all features, Express Route Unit Testing using Proxyquire and Mocha, Cucumber Tests, date formatting.

Hangman Game. <https://louise-hayes.github.io/Hangman/>

- **Dynamically generated HTML with Javascript and Bootstrap.**
- The app randomly picks a word from an array, and the user has to guess which word the app chose. The user is presented with the total score which persists between games, and game status which is reset automatically after each game. The game auto restarts after each win or loss. CSS animation is used to represent the lives lost per game.

Burger App <https://warm-cliffs-18252.herokuapp.com/>

- A Full Stack MVC Javascript, node.js, Express, **Handlebars** App deployed on Heroku, with a **custom built ORM** to map to mySQL DB . Also implemented Mocha Unit tests to test ORM find and update functions.

Friend Finder App

<https://secret-mesa-65524.herokuapp.com/>

- **Javascript, HTML, CSS, Node JS and Express** 'Friend Finding' App. This full-stack client-server application is hosted on **Heroku**.
- It takes in results from a users survey, then compares their answers with those from other users. The app then displays the name and picture of the user with the best overall match based on a scoring algorithm.
- Utilises **Mocha Unit tests** to test utility functions to find a match.

On This Date Weather News App

- Implemented with **Bootstrap, HTML, Javascript, JQuery & AJAX API** requests to access NY-Times and Weather API's. It persists search keywords in a noSQL **Firebase** Database. It also utilises an **Android Cordova technology** to run as an Android App.
- A Web App that takes in a date and location, and returns the weather and news for that past date from 1900-2017..
- Back-End Full Stack Developer in a team of 4. Responsible for : NY Times API function, date validation, user input validation and Cordova Android build.
- <https://jkltroth.github.io/Project1JKLP/>

Liri node command line app using Spotify, Twitter and OMDb API node.js npm modules <https://github.com/louise-hayes/liri-node-app>

- LIRI is a Language Interpretation and Recognition Interface somewhat like iPhones SIRI.
- It is a command line Node.js App that takes in parameters and returns back data. This App displays latest tweets, song and movie information using the spotify, omdb via request and twitter node npm modules.

Train Time <https://louise-hayes.github.io/trainTime/>

- Built using **Javascript, HTML, CSS, Bootstrap and noSQL DB Firebase** to host arrival and departure data.
- A Train Schedule Tracker made for a train station with routine daily train times. Presents users with an interface which displays trains and start times and frequency, and allows the addition of new trains.
